BSHREK FESTIVAL OF SPEED

SHADOWS IN THE CAROUSEL

Deep in the forests of the Nordschleife, where legends whisper and apexes bite, Ten10's Bshrek Festival of Speed roared to life. Somewhere in the shadows, the mythical ogre watched, judging if the drivers had the guts - and the grip - to survive his twisted playground. This wasn't just a race : it was a rite of passage.

Motsky

They say he was born from tire smoke and broken carbon. In the dense, whispering forests that wrap around the Nordschleife, long before telemetry and track limits, the story began. Passed down from old mechanics and worn-out racers, murmured in pit lanes and campfires, it tells of a creature - part ogre, part myth - who stalks the Green Hell. The few who claim to have seen him say he looks eerily like Shrek, but meaner, wilder... *Bshrek*, they whisper.

No one knows when he first appeared. Some say it was after a cursed night race, when lightning struck the Carousel and a driver vanished without

a trace. Others claim he's always been there, watching from behind the guardrails, ears twitching at the howl of overrevving engines. When fog swallows the long straights and rain pours down, when headlights flicker and confidence turns into cockiness - that's when he comes: drawn to lockups, fed by understeer, and merciless to those who dare disrespect the 'Ring.

They say you'll know he's near when the wind dies in the trees, and your telemetry starts lying. No setup can save you. No traction control will hold. If Bshrek chooses you, you don't spin - you *DNF*. ►

And that's what the Bshrek Festival of Speed is all about - a wild celebration where only the bravest dare to test their limits in the ogre's twisted playground. They say, "Welcome to the chaos. Welcome to the legend." This edition was no exception.

**"I was pushing so hard
that the heel of my foot
was entirely numb"**

In the misty hills of the Nürburgring, the German GT4 class saw a dominant performance from Verguld in his Mercedes AMG GT4. While others battled the elements and each other, Verguld stayed cool, composed, and far ahead of Katherine and Dinosaur, who completed the podium. Reflecting on the race, he said the victory "felt comforting" and that he "lost all pressure as soon as [he] crossed the checkered line". The car, he added, "felt pretty decent", relying on his usual setup routine to keep it dialed in. Despite the lack of on-track drama, the race took a physical toll: "I

was pushing so hard that the heel of my foot was entirely numb". For him, the key moment came right before the checkered flag - "cruising around the track one last time gave me some clarity and peace". A fitting end to a race defined not by chaos, but by control.

Running parallel to the GT4 showdown, the ever-competitive M2s roared through the forest - and it was Ten10 mainstay Toasty who emerged victorious from the chaos of Bshrek's domain. "I was lucky to get the win in the M2s", he admitted, quick to point out the pressure applied by the team's newest recruit, Piotr, who had been "absolutely flying" before a costly issue at their first pit stop. Things didn't get easier from there. As the race wore on, fatigue crept in, and mistakes followed. "Stenzel ended up being fairly close at the end, because of how many times I crashed in the later stages". Still, despite the mental toll, Toasty held on. "It was a difficult race to finish, but fun!".

With the forest once again silent, the Bshrek Festival of Speed closed its curtain - a wild success, and one we'll return to next year ! ■

unknown. Believed to depict the
mythical ogre that haunts the forests
surrounding the Nordschleife.

TEN10 WRC CHAMPIONSHIP

DEEP INTO THE POTHOLES

The Safari rally Kenya delivered chaos in its purest form : cratered roads, sudden rain, and brutal terrain chewed through cars like candy. Survival alone felt like victory. But through the mud and madness, Bahamut rose above it all, locking out a dominant 1-2.

Motsky

The Safari Rally Kenya is unlike anything else on the calendar - a race where the landscape itself becomes the fiercest competitor. Set against sweeping savannahs, rocky plateaus, and thick clouds of dust, it's a rally built on extremes. One moment it's bone-dry and blistering, the next a sudden downpour turns the road into a river of mud. Navigating the course demands more than speed ; it takes patience, resilience, and nerves of steel. For drivers and machines alike, it's less about pushing the limit and more about surviving it.

WILD PUMAS

As a biologist, I can confirm Pumas have no business roaming the African continent - they're native to the Americas. And yet, in the wilds of Kenya, two of them dominated. The Bahamut Ford Pumas of Rider and Azazel delivered a calm, precise, and relentless performance, sweeping the top two steps of the podium in a display of strength few could rival.

For Rider, it was a breakthrough moment. The young driver handled the punishing terrain with ►

ease and emerged with his very first win. “Rough. And rocks everywhere”, he said, summing up the event’s brutality. “My first win feels fantastic. I went into Rallye Kenya scared and anxious about the course and conditions. Coming out on top was a big surprise - I guess my pace was above the rest and I kept the car on the road”. Despite a couple of close encounters with trees, he managed to push hard when it mattered. “The flat-out sections felt amazing, and using the car to its full potential... The Puma held its own and I’m proud of it”.

“Without the competition, I’d just stagnate”

Behind him, teammate Azazel brought home second - not quite the win he’s used to, but a result that didn’t sour his mood. “Honestly? Refreshing”, he admitted. “It does also help that Rider is on Bahamut, so it stings just a little less. But without the competition, I’d just stagnate”. And he added with a grin : “Rest assured, my dear Motsky, I’ll win this”.

Azazel’s form has taken a clear step forward this season. Asked about the shift in momentum

compared to last season, especially with his old rival Bship struggling to match pace, he reflected: “I did get more consistent. I’m much more careful with my car now, so there’s less time spent repairing things - not to mention the time wasted on the road recovering from an incident. For example, this season was the first time I saw some parts of Monte Carlo, as I’m usually seen flying off the mountainside taking a turn way too fast”. As for his new car : “The [Ford Puma] S1600 is pretty fun. It didn’t take much for me to get running in it. I still do the same adjustments as I used to do in the WRC2 class”.

Bahamut’s 1-2 in Kenya sends a clear message : the team is dialed in, the Pumas are hungry, and the chemistry is strong. “All good in the neighborhood”, Rider said about the trio. “Me, Azazel, and Verguld all get along pretty well and are all competent drivers”.

If the rest of the season is anything like this round, stopping Bahamut is going to take some doing. ■

One of Bahamut’s Pumas on its way to the top of the food chain

TEN10 MOONDAY NIGHT

GLEN OR GLORY

Moonday hit the Glen like a storm - elbows out, tires screaming, and no mercy in the bus stop. Only one rule: send it or get sent.

Motsky

Under dark clouds of rain, the Porsche GT4s lit up Watkins Glen for a race full of twists. The opening laps featured a brilliant battle between Rider and Toasty, trading positions with skill and restraint as the track tested everyone's nerve. Up front, Forest and Anne led the charge, locked in a tight fight for first - until Anne was hit with a drive-through penalty that shook up the order. Even so, she recovered admirably to finish third. Verguld, calm and consistent, seized the opportunity to grab second, while Forest capitalized to take the win and extend his championship lead.

Another round to remember - a stacked grid, relentless pace, and proper racing all the way through. Watkins delivered, rain and all. ■

TEN10 MOONDAY NIGHT

WHEEL-TO-WASABI

Under Suzuka's cloudy skies, it wasn't just the tires that got cooked. Precision met pure chaos - and the sushi was definitely spicy.

Motsky

At Suzuka, the M2 class delivered drama of its own. Bship and Stenzel were inseparable for most of the race, trading places and pushing the limits. But it was Anne who stole the spotlight with a masterclass of control and pace: pole position by 0.015 seconds, the win, and fastest lap - a clean sweep. Verguld continued his consistent form with another second-place finish, and Forest fought through a drive-through penalty to reach the podium once again.

As for the season standings: in the Porsche GT4s, Forest still leads the way, with Verguld and Dino close behind - but Anne is closing in fast after two strong performances. In the M2 class, Toasty holds onto the top spot, while Stenzel and Bship continue their tight battle for second. ■

WITH STENZEL

TEN10 FOUNDER

Hop in with Stenzel - sim racing aficionado and gear guru. Today, he's giving us a behind-the-scenes tour of his sleek rigs, sharing why every piece of hardware was chosen, how it all comes together, and what makes his setup truly next-level.

Motsky

HEY STENZEL ! CAN YOU INTRODUCE US TO YOUR SIM RACING SETUP ?

Currently, I'm running triple screen Samsung 4K TVs, a Fanatec Clubsport DD+ wheelbase, Heusinkveld Ultimate+ pedals, a BDH SQH1 shifter, a Fanatec V2 Handbrake, Sparco EVO XL race seat and a Buttkicker Gamer 2. All of this is mounted onto a Next level Racing 160 Elite extruded aluminum rig. The rig is powered by an Omen 45L prebuilt computer with an intel 14900k, Nvidia 4090 and 64gb of DDR5 ram. This computer is a workhorse and the reason everything runs as smooth as it does. I currently own 4 rims : BMW M4 Podium for all GT racing, Monte Carlo Podium Rally wheel, Formula F1 V2.5 and a BMW GT2 round wheel.

IS THIS YOUR FIRST RIG ? IF NOT, WHAT DID YOU START WITH BEFORE UPGRADING ?

This is the 5th-ish revision of my main rig since I started sim racing 5 years ago. I began on a Next Level Wheelstand with a belt-driven Fanatec CSW 2.5 Wheelbase, Fanatec shifter and Fanatec v3 pedals.

WHAT MADE YOU CHOOSE THIS HARDWARE OVER OTHER OPTIONS ON THE MARKET ?

At the time I started sim racing, Fanatec was really popular amongst people looking for mid to high range gear without breaking the bank too much. It was also compatible with Xbox, which I was racing on at the time. ►

HOW DID YOUR RIG EVOLVE OVER TIME ? ANY KEY UPGRADES ?

Throughout the years, I've replaced parts that made sense at the time. There really wasn't any method to my madness. My favorite upgrade by far was the shifter. The BDH SQH1 has a realistic mechanical feel and kicks immersion up a notch when power shifting through the gears or slugging through a rally.

HOW DO YOU FEEL ABOUT USING DIRECT DRIVE (DD) ? WAS THE JUMP NOTICEABLE ?

I would never hesitate to recommend a direct drive to anyone looking for clean and accurate feedback. The jump from belt driven to direct drive was noticeable in not only the feedback but the noise of the wheelbase. My biggest gripe with the Fanatec CSW 2.5 was hearing the fans and belts moving during a race.

IN YOUR OPINION, DOES DD REALLY MAKE THAT MUCH OF A DIFFERENCE AT OUR LEVEL ?

The fastest guys in our group do not have direct driven bases (some even use a controller) and

they're on the podium more times than not. I think a DD base helps enhance the enjoyment of sim racing more than making sim racers at our level any quicker on track. The beauty of sim racing is that it's truly for everyone and not just for those who spend the most money.

IF YOU COULD UPGRADE ONE PART OF YOUR RIG TODAY, WHAT WOULD IT BE AND WHY ?

The triple screens hands down. My triple TVs were open-box specials from a local electronics store. They're limited to 60fps and suffer from ghosting, blurriness at high speeds and pixelation. My ideal monitor specs would be 1440p, 32-43" in size, and 120hz or more.

DO YOU USE YOUR RIG FOR ANYTHING BEYOND RACING - LIKE FLIGHT SIMS, OR JUST CHILLING IN CONTROLLER BASED GAMES ?

I used to play Microsoft Flight Sim and Digital Combat Sim but found that trying to make the it multipurpose meant having to compromise in too many places. Sim racing being the most important to me, I made it a 100% race rig.

IF I RECALL CORRECTLY, YOU HAVE BOTH PC AND PS. HOW DO YOU MANAGE THAT ?

I'm actually fortunate enough to have two rigs: One for PC and one for PlayStation. The PS rig has all my older equipment and still is a very capable sim rig. Having two setups makes it easy to switch from PC to console without having to fiddle with settings or changing equipment out.

I SAW YOU'RE USING A BUTTON BOX ON THE PS SET UP. HOW DOES THAT WORK ?

It's from a small, independent online store called Simracing4u based in the UK. It's a fully functional button box on PC and works with Assetto Corsa Competizione on PlayStation without having to program anything. As far as I know, ACC is the only title that is supported on the PS because it uses predefined, and unchangeable keyboard strokes in-game that the button are individually programmed for.

WHAT ARE SOME OF THE CHALLENGES YOU RAN INTO WHEN BUILDING YOUR RIG ?

The biggest challenge I ran into was fitting the rig to someone who is 6'4" which is no easy task. For some reason, seats on aluminum cockpits sit much lower than they would in a real car and can cause a lot of achy muscles if the ergonomics are off. Adjusting the rig was a lengthy process but well worth it.

WHAT ADVICE WOULD YOU GIVE TO SOMEONE LOOKING TO BUY THEIR FIRST WHEEL OR BUILD THEIR FIRST RIG ?

Do your research. What will work for one person won't work for another. No one knows your size, your budget, your system of choice

or your sim racing goals. For me, I figured out right away that the most important thing was having fun and if I won a race here or there then that would be a bonus. My goal was, and always will be, immersion.

THANK YOU STENZEL ! THAT'S ALL FOR ME TODAY, HOPE TO SEE YOU ON TRACK SOON !

Thanks for the interview ! If anyone has any questions on equipment, they can reach out to me anytime and hopefully my experience with different equipment can help you out. ■
